

More central banks cutting rates

- ◆ The Federal Reserve has finally started to loosen the monetary reins...
- ◆ ...but with uncertainties relating to labour markets, trade flows, fiscal dynamics, and the US election...
- ◆ ...we examine the growth and inflation outlooks across regions and sectors

After the global growth concerns that sprung up over the summer, in aggregate, data over the last few weeks have brought about some calm.

Encouraging US releases

US labour market data look much healthier, after the 254k jobs added in September and the drop in the unemployment rate, even if some other variables point to workers losing confidence in their job prospects.

The rest of the US data remain robust as well. **Consumer spending keeps ticking along**, and the Atlanta Fed's GDP now points to 2.5% growth (q-o-q annualised) in the third quarter. However, elsewhere across the world, the story isn't quite as comforting.

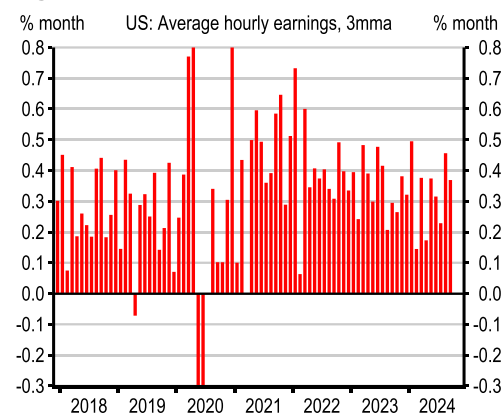

The US employment release was strong in September

1. Non-farm payrolls picked up in September, breaking a downward trend...

Less rosy data elsewhere

We have seen further soft data in mainland China – with weaker surveys backing up **subdued retail spending and still-weak construction activity**. Authorities have responded with further stimulus; however, with consumer confidence at record lows, we don't expect a rapid recovery in the data.

Low confidence in China is holding back spending

3. Fiscal stimulus may further accelerate in mainland China...

European manufacturing data have been weak

In Europe, there is little room for cheer. The **manufacturing data have gone from bad to worse**, and, despite still robust labour markets, consumers are not showing the same appetite to spend as those in the US. In the UK, where things are broadly improving, uncertainty over the budget has sapped consumer and business confidence.

Services outperforming

There is also a clear sectoral split. The latest round of PMI data indicates a widening gap between the world's manufacturing and service sectors – with the former showing further declines, while **growth continues in the latter**. This means that the uneven trade recovery is still reliant on electronics and US demand.

Against this backdrop, **many of the cost pressures have muted a bit**. Commodity prices are volatile but still lower than earlier this year, while shipping cost pressures continue to fade, despite the port strikes in the US and ongoing conflicts across the world.

Central banks easing

And so more central banks are **starting or accelerating their easing plans**. The Federal Reserve's 50bp cut in September may not be repeated in November, but we have seen more central banks either start to or prepare to move more aggressively with their easing cycles.

Finally, the US election is now only a few weeks away. The race remains extremely close – for both the presidency and Congress. The outcome of the election **will play a big role in shaping the outlook** for 2025 and 2026.

Our forecasts

Our GDP growth forecasts are largely unchanged with an upgrade to the US and a smaller one to India offset by a downgrade to Europe, keeping our 2025 global GDP growth forecast unchanged at 2.6%, while we have **edged up our 2024 forecast by 0.1% to 2.7%**.

On inflation we keep our **2024 global forecast unchanged at 5.5%**, even though we have lowered the forecast for the advanced economies from 2.8% to 2.6%, which has been offset by an increase in the emerging economy aggregate, mainly driven by Latin America. For 2025, our global inflation forecast has fallen from 3.7% to 3.3%.

More central banks are cutting rates

We forecast 2024 global GDP growth of 2.7%

Key GDP growth forecasts

% Year	2024 forecast		2025 forecast		2026 forecast
World	2.7	(2.6)	2.6	(2.6)	2.7
US	2.7	(2.4)	1.9	(1.6)	1.8
Mainland China	4.9	(4.9)	4.5	(4.5)	4.4
Japan	0.1	(0.4)	1.3	(1.2)	0.8
India*	7.1	(7.3)	6.7	(6.5)	6.5
Eurozone	0.7	(0.6)	1.0	(1.3)	1.3
UK	1.1	(0.9)	1.4	(1.3)	1.8
Brazil	3.4	(2.0)	2.4	(2.1)	2.6
Mexico	1.4	(2.1)	1.0	(1.8)	2.5

Note: *India data is calendar year forecast here for comparability. Previous forecasts are shown in parenthesis and are from the Macro Monthly dated 11 July 2024. Green indicates an upward revision, red indicates a downward revision.

Important information on sustainable investing

"Sustainable investments" include investment approaches or instruments which consider environmental, social, governance and/or other sustainability factors (collectively, "sustainability") to varying degrees. Certain instruments we include within this category may be in the process of changing to deliver sustainability outcomes.

There is no guarantee that sustainable investments will produce returns similar to those which don't consider these factors. Sustainable investments may diverge from traditional market benchmarks.

In addition, there is no standard definition of, or measurement criteria for sustainable investments, or the impact of sustainable investments ("sustainability impact"). Sustainable investment and sustainability impact measurement criteria are (a) highly subjective and (b) may vary significantly across and within sectors.

HSBC may rely on measurement criteria devised and/or reported by third party providers or issuers. HSBC does not always conduct its own specific due diligence in relation to measurement criteria. There is no guarantee: (a) that the nature of the sustainability impact or measurement criteria of an investment will be aligned with any particular investor's sustainability goals; or (b) that the stated level or target level of sustainability impact will be achieved.

Sustainable investing is an evolving area and new regulations may come into effect which may affect how an investment is categorised or labelled. An investment which is considered to fulfil sustainable criteria today may not meet those criteria at some point in the future.
